NEWS RELEASE

November 7, 2011

TINKA COMMENCES DRILLING AT TIBILLOS COPPER PORPHYRY PROJECT, PERU

Vancouver, Canada - Tinka Resources Limited (the “Company”), (TSXV - TK; Frankfurt - TLD; Pinksheets -TKRFF), announces that drilling has commenced at the Company’s Tibillos copper porphyry project located 65 km east of Ica, Peru.

Initially, six diamond drill holes will test anomalies identified from an induced polarization (IP) geophysical survey completed in January 2011. Data from the survey produced a target area in the central part of the porphyry roughly 800 m east-west by up to 500 m north-south.

The geophysical anomalies coincide favourably with the geology mapped along the streambeds. The strongest conductors can be attributed to a strongly altered intrusive body that is in contact with the surrounding sediments and volcanics which have locally been altered to hornfels. Previous rock sampling surveys along these drainages have yielded highly anomalous copper values over an area of at least 800 m east-west by 600 m north south, again supported by the observed geology.

The Company's Qualified Person, John Nebocat (P.Eng.), has reviewed and approved the contents of this news release.

On behalf of the Board,

“**Andrew Carter**”
